CHAPTER V
CONCLUSION AND SUGGESTION

In this chapter present the conclusion of the finding and the suggestion for the future researchers.

A. Conclusion

Based on the discussion above the writer makes the conclusion as follows:

1. The Intention of Anger Expression

The researcher analyzed the intention of anger expression on the netizen comment. This comments are taken from the website called Washingtonpost, the data are from the two news which informing the Rohingya’s refugees. The first news is entitled ‘Why Aung San Suu Kyi isn’t protecting the Rohingya in Burma’ and ‘The ethnic cleansing of the Rohingya’. The researcher use Yule’s theory about speech act. The writer found out 11 data (38%) as the blaming intention, 5 data (17%) as mocking, 4 data (14%) as accusing, 2 data (7%) as questioning, 3 data (10%) as complaining, 1 datum (4%) as threatening, 1 datum (4%) as suggesting, 2 datum (7%) as commanding. It can be inferred that most dominant intention on the comment of Rohingya refugees in washingtonpost website is blaming intentions. The netizen not only blame the Myanmar as the country who killed the poor Rohinya, but they also blame the Rohingya as the cause of the genocide. Rohingya live in the land that not theirs and it is Myanmar’s government authority to expel them from Burma. Some netizen also blame the muslim of the world for not helping them even though they have same religion, Islam. In this technology era where people can give their comment directly on the website, it is important to know what their intention. The reader who reads the comment and understand the intention will chose respectful words for not hurting the others.
2. The Implicatures of Anger Expression

The researcher analysis 29 data of netizen comment and found two types of implicatures, conventional implicature and conversational implicature. For the conversational types there are two kinds of it but the data only shows particularized conversational implicatures variety. Conventional implicatures is arise in conversation and do not depend on contexts such as Because these people are Muslims the world is doing nothing and if there is one party responsible for this situation, it is Pakistan. The conversational implicatures which have only particularized type is implied meaning that take place in specific context such as Ethnic Cleansing by Nobel Winner, The apple truly does not fall far from the tree, and This is a very disturbing story. The result of the research, writer found out 4 data as conventional implicatures and 25 data as conversational implicatures. The most dominant is conversational type. The netizen write the comment certainly has implied meaning. By understanding the meaning, people know which netizen who take sides on Rohingya or Myanmar. Implicatures leads to understand the world’s community respond about the humanity rights of Rohingya, whether they are supporting them or otherwise.

3. The Maxim Violation of Anger Expression

The researcher analysis the maxim violation uses Cutting’s theory who divided violation into four types there are violating maxim of quantity, violating maxim of quality, violating maxim of relation, and violating maxim of manner. The data are showed all the maxim violation. From the analysis of comment on netizen of washingtonpost, the researcher found out 12 data (41%) as the violation maxim of quantity, 7 data (24%) as the violation maxim of quality, 1 datum (4%) as the violation maxim of relation, 9 data (31%) as the violation maxim of manner. It can be inferred that most dominant of maxim violation of Rohingya refugees comment in washingtonpost website is maxim of quantity. The comments are less
information and not give the source of their argument take from. So the readers not fully understand about the comment.

B. Suggestion

After drawing the conclusion from the result of the data analysis, the researcher proposes some suggestion. In this research the researcher faces some problem and difficulties in conducting the finding related to the topic because the data was from the comment on website, which is still rarely observed. Hence, the researcher gives suggestion as follows:

1. For Future Researcher

For the future researcher, the writer hopes this research can help for writing better research in linguistic study. They can take another issue for anger expression such as the pragmalinguistic and politeness strategies. They also can take another object for the data such as from the reality show or from the song lyrics.

2. For Students of English Department

By studying about pragmatic can help the students to improve and increase their ability in communication. The students should read this research for more information and understanding about pragmatic, especially in the theory. So the students can pay more attention when they communicate with others.
