Abstrak
Tujuan dari penelitian ini adalah untuk mengidentifikasi jenis tumpang tindih dan untuk menggambarkan niat tumpang tindih dalam percakapan antara tuan rumah dan Garry Neville pada highlight Liga Utama Inggris. Data diambil dari percakapan yang berisi tumpang tindih dalam percakapan antara tuan rumah dan Garry Neville pada highlight Liga Utama Inggris. Peneliti mengumpulkan data dengan mengamati video dan mendokumentasikannya menjadi data transkrip. Metode penelitian ini menggunakan metode deskriptif kualitatif. Peneliti menggunakan teori dari Kennedy dan Camdens (1983) tentang fungsi tumpang tindih dan juga mengambil satu teori fungsi dari Li (2001). Studi ini menemukan bahwa ada 7 fungsi tumpang tindih yang ditemukan dalam percakapan antara tuan rumah dan Garry Neville yaitu: klarifikasi menghasilkan 21,2% data, kesepakatan menghasilkan 30,7% data, bantuan menghasilkan 11,5% data, ketidaksepakatan menghasilkan 15,4% data, tangensialisasi menghasilkan 7,7% data, perubahan subjek menghasilkan 7,7% data, pengambilan lantai menghasilkan 5,8% data.

Kata kunci: analisis percakapan, tumpang tindih, fungsi, sorotan yang diperluas

Abstrak
The aims of this research is to describe the functions of overlapping in the conversation between the host and Garry Neville on English Premiere League extended highlight. The data were taken from the conversation that contain overlapping in the conversation between the host and Garry Neville on English Premiere League extended highlight. The researcher collected the data by observing the video and documenting it into transcript data. The method of this research is using descriptive qualitative method. The researcher uses the theory from from Kennedy and Camdens (1983) about the function of overlapping and also takes one function’s theory from Li (2001). The study found that there 7 functions of overlapping that are found in the conversation between the host and Garry Neville those are : clarification produced 21.2% data, agreement produced 30.7% data, assistance produced 11.5% data, disagreement produced 15.4% data, tangentialization produced 47.7% data, subject change produced 7.7% data, floor taking produced 5.8% data.

Keyword : conversation analysis, overlapping, function, extended highlight
1. INTRODUCTION
Conversation is the way in which people socialize, develop and sustain their relationships with each other (Liddicoat, 2007: 1). In our daily life we always use a conversation as a tool of communication, without conversation the message that we will be sent to the other person will be not delivered. To make an easy conversation, the communicator can take the best time to take a part in their conversation, because the purpose of a conversation is to give clear information without any wrong perceptions between the communicator and the communicant. Moreover both of the participants realize about the turn taking signal to make the conversation between the participants become an effective communication.

One of the most fundamental organizations of practice for talk-in-interaction is the organization of turn-taking (Schegloff, 2007: 1). It means that turn taking become an important segment in communication process, because with the role of turn taking the flow of the communictaion will become an effective communication. Turn taking becomes an important part of communication because this theory forces someone if there is no dominant person in a communication wether from the communicator or from the communicant. The communicator and communicant will form a good interaction if they understand what the material they will discuss each other. The other aspects that can form an effective communication is both of the communicator or communicant knows when they become a good listener and speaker. A good listener and speaker know the best time to respond each other.

In real condition of conversation, we can not plan the turn taking which is appropriate with the theory that has been explained before, because the conversation in real condition flows spontaneously. In spontaneous conversation, the participants often talk in same time; this phenomenon is usually called by overlap; sometimes this phenomenon disturbs the flows of the conversation but everyone that are involved in a conversation can not avoid this phenomenon.

Overlapping may occur when two participants of the conversation speak simultaneously in same time, and this phenomenon usually occurs in natural conversation in our daily life. An overlapping speech in a conversation can show how the participants interest with the flow of the conversation. The study of
overlapping had been done by professionals researcher before, one of the researcher who has been conducted the research about overlapping is Martinez (2018)

In order to analyze the overlaps that happen in daily conversation, the most suitable approach that can be used in this research is conversation analysis. Sidnell (2009: i) said that “Conversation analysis” is an approach to the study of social interaction that focuses on practices of speaking that recur across a range of contexts and settings. It means that “conversation analysis” study the interaction of social community especially in the form of communication. The study of overlapping had been done by professionals researcher such as Martinez (2018), Heldner & Edlund (2010), Akmaliyah (2014), Imanah (2018), Cantrell (2014) and Ivanchenko (2018).

Schegloff in Liddicoat (2007: 90) give an example of overlapping talk that happen in daily conversation. Schegloff cites this following conversation as a case in point:

Marty: ih w’ z a liddle well done.
Fred: uhm,
Anne: Oh [ : I s] aw) a) I : lot’ v ra:re pieces
Fred: [I(t w z ) fi) : ne).
Marty: [Ihw’ za]- lh- ] lh ] w’ z a fantastic piece a’ meet

In this example, the three participants begin the conversation in same time. Marty produces a statement that is following by two dissagreement from Fred and Anne. The two dissagreemnts are showed by Fred’s uhm and Anne’s oh. This example of overalpping talk will happen spontaneously in daily conversation.

The extended highlight of English Premiere League (EPL) usually discusses about the match which have been done before. In this highlight the presenter is not only discussing about the famous team in EPL such as Manchester United, Liverpool, Chelsea and Arsenal, but also discuss the other team which occupy the middle classmen or maybe the lowest classmen. This fact shows that the extended highlight of English Premiere League (EPL) is a professional TV program. This program always invites profesionals speaker to discuss the match or everything about English Premiere League. The extended highlight of English Premiere League is not only discussing about the match, but also it usually discusses about
the team strategy or player issue that happen in EPL. In this TV program overlapping happens in a high number of overlapping. Based on the interesting fact above, the researcher interest to find out the types and function of overlapping happen in this TV program.

2. METHOD
This study uses descriptive qualitative method, it means the data are explained in word, table, and sentence and then it will be interpreted into a paragraph. The researcher uses the theories from Kennedy and Camdens (1983) to find out the function of overlapping and the researcher also take one functions theory from Li (2001). The data was taken from the conversation in extended highlight of English Premiere League, on Phillie Nevile episode March 22, 2019 that contain overlapping phenomenons. The technique of collecting data are watching the the talkshow from youtube, downloading the video to ease in categorizeing the data, transcripting the data and then selecting the utterance that contain overlapping. The researcher analyses the data by Describing the functions of overlapping by using the overlapping function’s theories from Kennedy (1983) and Li (2001)

3. RESULT AND DISCUSSION
3.1 Result
After analyzed the overlapping that happens in conversation between the host and Garry Neville in extended highlight of English Premiere League, the researcher found 52 utterances that contain overlapping in that episode, the researcher would like to the function of overlapping. In this study, the researcher found 7 functions of overlapping in the conversation between the host and Garry Neville in extended highlight of English Premiere League, those are: clarification, agreement, assistance, disagreement, tangentialization, subject change, floor taking. To clarify the finding of the analysis, it can be shown in the table below:

<table>
<thead>
<tr>
<th>No</th>
<th>Functions of Overlapping</th>
<th>Percentage (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Clarification</td>
<td>21.2</td>
</tr>
<tr>
<td>2</td>
<td>Agreement</td>
<td>30.7</td>
</tr>

<td><strong>Total</strong></td>
<td><strong>100</strong></td>
</tr>
</tbody>
</table>

Based on the finding of data analysis that has been done by the researcher above, it can be concluded that the total of utterances that contain overlapping talks are 52 utterances. The function of overlapping that the most appear in this study is “agreement” with resulted 30.7% utterances that contains agreement function.

3.2 Discussion

The current study will discuss the whole data that has been found in data analysis. The current study found that there are 52 utterances in the English Premiere League Extended Highlight that contains overlapping talk. The researcher wants to find the function of overlapping in the English Premiere League Extended Highlight. The current study found that there are 7 functions of overlapping in this research. They are clarification produced 21.2% data, agreement produced 30.7% data, assistance produced 11.5% data, disagreement produced 15.4% data, tangentialization produced 7.7% data, subject change produced 7.7% data, floor taking produced 3 5.8% data.

The previous study that related to this study is the research that has been conducted by Imanah (State Islamic University Sunan Ampel Surabaya, 2015). The title of the study is “Conversational Analysis Ofinteruptions And Overlaps Uttered By Host And The Guest In The Ellen Talk Show”. The objective of the study is to find the most frequent reasons of interruptions and overlaps uttered by the participant of talk show. The result shows that there are 17 utterances that contain overlapping in the talk show. There are 7 reasons of overlapping from Wardhaugh’s theroy that is used in this study, but the finding just found 5 reasons or function of overlapping in that talkshow, those are ; breaking resulted 2 (11.7%) data,
completing resulted 7 (41.6%) data, disagreeing resulted 1 (5.9%) data, seeking clarification resulted 3 (17.6%), and showing agreement resulted 4 (23.5%) data. The most dominant data of this study is “completing” with resulted 7 utterances that contain completings overlapping and the less reason of overlapping that found in this study is “disagreeing” with just found 1 utterances that contain disagreeings overlapping. the reason of overlapping that which is not found in this study are asking for help and correcting.

By thus previous study that has been conducted by Imanah, the current study will has some differences with the previous study. The current study will analyze the types of overlapping and the functions of overlapping that are found in “English Premiere League Extended Highlight” . The current study found that there are 52 utterances in the English Premiere League Extended Highlight that contains overlapping talk. The function of overlapping that is the most appear is “agreement” with resulted 16 (30.7%) utterances that contains agreement function.

4. CONCLUSION
Based on the findings and discussions that have been explained before, the conclusions can be showed as follows. The research question of this study is to describe the functions of overlapping in extended highlight of English Premiere League. The current study found that there are 7 functions of overlapping in this research. They are clarification produced 21.2% data, agreement produced 30.7% data, assistance produced 11.5% data, disagreement produced 15.4% data, tangentialization produced 7.7% data, subject change produced 7.7% data, floor taking produced 5.8% data. The highest data of the functions of overlapping that happens in this study is agreement which produced 30.7% from 100% data. The lowest data of the functions of overlapping in this study is floor taking which only produced 5.8%. Agreement is one of the types of overlapping that is the most often appears in this study. This function is to indicate that the second speaker agrees with the statement from the first speaker that has been overlapped by second speaker. This function can indicates that the second speaker has a good attention with the conversation.
