CHAPTER V
CONCLUSION, IMPLICATION, AND SUGGESTIONS

In this chapter, the researcher presents the results of the research analysis including conclusions, implications, and suggestions.

A. Conclusion

Based on the data analysis and findings in the previous chapter, it can be concluded that:

1. The Types of Register

Based on the data analysis and discussion of findings in the previous chapter, of the five types of registers proposed by Martin Joos, there are two types of register found by the researcher in this research paper, namely the consultative register (30%) and the casual register (70%). Based on the percentage, it can be concluded that the highest frequency data on the types of register in this study is the casual register which is 70%.

2. The Meaning Types of Register

Based on data analysis and discussion of findings in the previous chapter, from the seven meaning types of register proposed by Geoffrey Leech, the researcher found two meaning types of registers in this research paper. The meaning types of register found are affective meaning (20%) and social meaning (80%). Based on the percentage, the highest frequency data on the meaning types of register in this study is the social meaning which is 80%.

B. Implication

Based on the discussion in previous chapters, the results of this study present theoretical and practical implications, as follows:

1. Theoretical Implication

In this section, the researcher presents matters related to the research question. In this step, the researcher will discuss the theories used by the researcher in analyzing the types of registers and the types of meaning of registers.

a. Types of Register

In this research, the researcher used the theory by Martin Joos (1967) in analyzing types of registers. In addition, the researcher also found a previous study related to this research, this research belongs to Asmara et al. (2021).

b. Types of Meaning of Register

In this research, the researcher used Geoffrey Leech's theory (1974) to determine the types of meaning of register and Dell Hymes' SPEAKING theory (1972) to identify the social context. In this research, the researcher also found a previous study related to this research, namely research conducted by Nurnaningsih et al. (2018).

2. Practical Implication

a. Pedagogical Implication

Determining the types and meaning of types of registers is not an easy thing. The researcher must describe the context of each data then analyze it and classify it into the appropriate types or meaning types. Analyzing the types and meaning types of registers through the theories used by the researcher in this study can enrich knowledge about language variations in sociolinguistics, especially registers. Researchers can determine the meaning of a word in a particular field or social class. In addition, this study can enrich previous research on registers and at the same time as an additional reference in teaching sociolinguistics.

b. Non Pedagogical Implication

In analyzing each data in this study, the researcher found differences in the meanings in the standard meaning and in the register meaning. This can add knowledge and insight into terms contained in the world of makeup as discussed in this research paper so that it can be used in life, especially those related to beauty.

C. Suggestion

After revealing the conclusion of the English register used in Gina Shkeda's Youtube Channel in the previous step, the researcher would like to present suggestions, as follows:

1. Sociolinguistics Lecturer

In this all-digital era, people are forced to keep up with the times and be technology literate. What is meant by technology literacy here is to get to know various digital platforms and the content in them. This research is limited in types and meaning types of registers used in Gina Shkeda's Youtube Channel. This research is expected to be used by sociolinguistics lecturers in conveying learning or material to students, especially on sociolinguistics material and more specifically regarding registers. This research can be used as a reference in teaching about the use of language variations in a field that is currently popular in the modern era with a digital platform that is very popular in all circles, namely Youtube.

2. Future Researcher

In research on registers, it is necessary to have an in-depth understanding of the use of speech in a particular field. After compiling this research paper, the researcher suggests that future researchers can analyze registers with different problems such as analyzing the linguistic form of register or the reason of using register. In addition, future researchers can also analyze registers from other fields such as registers in the culinary world, online gaming world, or other fields by utilizing social media which is increasingly in demand by all circles.
